DIAMOND DRILLING

WHAT IS DIAMOND DRILLING?

DIAMOND DRILLING IS THE EASIEST WAY TO DRILL CLEAN AND ACCURATE HOLES FROM 22 TO 300MM

The Feature and Benefits are:

- Fast drilling speeds
- Low vibration, especially when drilling with a stand
- Less noise and dust
- It is cost effective versus hammer drilling

DIAMOND DRILLING IS SUITABLE FOR A WIDE VARIETY OF END-USERS

- **Electricians:**
 - ✓ blind holes for connections boxes, sockets and switches
 - ✓ through holes for electric cables
 - ✓ through holes for cable tray
- **Plumbers:**
 - ✓ through holes for evacuation pipes
 - ✓ through holes for water pipes
- **HVAC companies (heating, ventilation and air conditioning):**
 - ✓ air vents for residential construction
 - ✓ evacuation of burnt gas from boiler, commercial heating and air conditioning systems
- **Construction companies/maintenance service:**
 - ✓ blind holes for safety railings and banisters
 - ✓ concrete / material sampling
 - ✓ stitching to create larger openings

DeWALT'S APPROACH TO DIAMOND DRILLING

DeWALT's philosophy to product design has always been focused on the needs of the end-user and developing products which centre on 4 key areas; Durability, Productivity, Ease of use and Comfort.

All products go through stringent durability tests including hours of drilling in real life applications. Particular attention is paid to user comfort and high productivity levels ensuring DeWALT diamond drills exceed user expectations.

UNDERSTANDING THE DIAMOND SYSTEM

There are two fundamental questions which must be asked before choosing a drilling system:

1) WHICH MATERIALS WILL BE DRILLED THROUGH?

This will determine whether a wet or dry system is required.

A dry drilling system (meaning that there is no water required) is needed when drilling in soft materials such as

- ✓ Soft masonry, bricks
- ✓ Thermal blocks (Poroton, Porotherm)
- ✓ Light breezeblocks
- ✓ Limestone
- ✓ Gas beton

When dry drilling, it is always recommended that a dust collection device is used.

Dust will be significantly reduced resulting in the following benefits:

- Stops the core bit overheating – increasing the life of the core
- Reduces drilling time – increasing efficiency
- Decreases air-borne dust – increasing user safety

A wet drilling system is required when drilling into hard materials such as

- ✓ Concrete, Reinforced / Vibrated concrete
- ✓ Engineering bricks
- ✓ Natural materials such as stone, granite and marble

Wet drilling means that water is used during the application, this delivers the following advantages:

- Significantly faster drilling speed – increases working efficiency
- Eliminates dust – safer and more comfortable working environment
- Longer life of the cores – decreases cost per hole

2) WHAT IS THE MAXIMUM HOLE DIAMETER AND DRILLING DEPTH THAT WILL BE REQUIRED TO DRILL THROUGH?

This will determine which drill to choose and whether a stand is required.

A stand should be used when drilling:

- More than 100mm in diameter into masonry
- More than 40mm in concrete or hard materials

A drilling stand presents the following benefits:

- Reduces the risk of kick-back in case of stalling
- Enhances user comfort, especially when using large cores
- Guarantees straight, level holes which are often difficult to achieve hand-held
- Reduces the level of vibration resulting in a much safer and more comfortable working condition.

The chart on the next page will help you to choose the right DeWALT drilling system for your application.

D215826 Masonry fixing set
Used to fasten the stand to a masonry wall – The dowel can be used several times.
M12 Ø 20mm

BRACING BRACKET

The bracing bracket is ideal for indoor applications and for downward drilling. Using this method of fixing, the drilling stand is jammed against the drilling surface using an opposing wall or ceiling. It is quick and easy to set up and prevents the need of a mechanical anchor. The bracket extends from 1.7 to 3m.

VACUUM PUMP

Provides quick and easy set up of drilling stand to position. The pump can be used when drilling on the floor or a wall, but is not recommended for drilling through a ceiling. The surface must be flat (i.e. vibrated concrete) and will not work on a surface with mortar joints.
