

## Best Hair Transplant in Kolkata

---

Much like good health and youth, we often take our hair for granted—until it begins to thin or disappear. For many, a hair transplant can restore the appearance of a full—or at least fuller—head of hair, helping boost both confidence and self-image.

A hair transplant is a surgical procedure that relocates hair you already have to areas experiencing thinning or balding. While this technique has been used for decades, modern advancements have significantly improved its effectiveness and natural-looking results.

### Hairline Transplant

A hairline transplant specifically targets a receding hairline, restoring hair along the top of the forehead and temples. A receding hairline is a hallmark of male pattern baldness, the most common form of hair loss in individuals assigned male at birth (AMAB). By reconstructing the hairline, this procedure helps bring back a youthful, balanced appearance to the face.
